Professional Summary

Senior Frontend Developer with 3+ years of experience building high-performance, production-ready web applications using React, Next.js 14 (App Router), and TypeScript. At Slick Networks, I led a full payment integration using MoneyHash SDK — covering 3DS modal flows, guest checkout, and a two-intent architecture. I improved app performance by 30% at Simplexmed and cut page load times by 45% at Stemwizard. I also build AI-powered apps on the side, including a voice-based English practice app (Quizly) using React Native and OpenAI. I work well independently or as part of a team, and I'm comfortable owning technical decisions from design all the way to deployment.

Technical Skills

- **Languages:** JavaScript (ES6+), TypeScript (strict mode)
- **Frontend:** React.js, Next.js 14 (App Router, Server Components, Server Actions), Redux Toolkit, RTK Query, TanStack Query v5, Zustand, Context API, SWR, React Hook Form, Zod
- **UI Frameworks:** Material UI (MUI v6), Tailwind CSS, Daisy UI, Shade CN, Bootstrap
- **Testing:** Cypress (E2E), Jest, React Testing Library, Lighthouse
- **Auth & Security:** NextAuth v5, OAuth 2.0, Auth0, HttpOnly cookie sessions, BFF proxy pattern
- **Payments:** MoneyHash SDK (3DS, guest intent flow), PayPal, Stripe (canMakePayment)
- **Backend / APIs:** Node.js, Express.js, REST API design, Socket.IO, Axios, MongoDB, PostgreSQL
- **DevOps & Tools:** Git, GitHub, Bitbucket, GitHub Actions (CI/CD), Husky, Webpack, ESLint, Prettier, Vercel, Docker (basics)
- **Mobile & AI:** React Native (Expo), OpenAI API, Claude API (MCP, Claude Code CLI), Figma-to-Code workflows
- **Practices:** Agile / Scrum, Component-Based Architecture, SSR / ISR / CSR, Code Splitting, Lazy Loading, WCAG Accessibility

Professional Experience

Slick Networks, Inc. (King Revolution)
Lahore, Pakistan — On-site

Feb 2025 – Present

Senior Frontend Developer (React / Next.js)

SaaS eSIM and mobile recharge platform built on Next.js 14 App Router, strict mode, Tailwind CSS, and a Laravel REST API.

- Architected a Transaction History module supporting two backend data shapes (Telinta CDR and ASTPP) with tab filtering, pCode extraction logic, and complete TypeScript type coverage from API to UI.
- Integrated the MoneyHash SDK for end-to-end payment processing — including 3DS modal handling, guest intent flow for unauthenticated users, and a two-intent checkout architecture.
- Built Cypress E2E test suites covering slow-API timing, reCAPTCHA bypass, OTP modal inputs, and pre-push Git hooks via Husky — significantly reducing manual regression effort.
- Set up a modular Claude Code CLI context system (.claude/ folder) with Figma-to-code workflows via MCP and reusable slash commands, improving the team's AI-assisted dev speed.
- Integrated NextAuth v5 for session management via HttpOnly cookies using a BFF proxy pattern — keeping API credentials server-side and eliminating browser token exposure.
- Ran daily Scrum stand-ups, contributed to sprint planning, and reviewed PRs to keep code quality high across the team.

Nextgen Property

United States — Remote (Contract)

Sep 2024 – Jul 2025

Senior Frontend Developer (MERN Stack)

US-based property listing and management platform. Remote contract running alongside primary role.

- Built a shared React.js + Tailwind CSS component library used across feature teams, reducing UI inconsistency and repetitive dev work by ~25%.
- Set up and maintained CI/CD pipelines using GitHub Actions for automated builds, linting, and deployments to staging and production.
- Mentored junior developers through regular code reviews and enforced clean code and design system standards across the codebase.
- Improved accessibility (WCAG 2.1) and on-page SEO across key pages, making the app more usable and search-engine friendly.
- Used Formik + Yup for complex multi-step forms with client-side validation, improving data quality and user experience.

Simplexmed (Obsidian)

Jan 2022 – Feb 2025

Abbottabad, Pakistan — On-site

Senior Frontend Developer (React / Next.js)

Healthcare SaaS platform (ObsidianPM) for project management and clinical operations built on React and Node.js.

- Improved ObsidianPM's overall performance by 30% using code splitting, lazy loading, memoization, and render optimization.
- Cut API response latency by 14% by migrating to TanStack Query with optimistic updates, request deduplication, and background refetching across microservices.
- Built a real-time bidirectional chat feature with Node.js and Socket.IO for instant in-app messaging between clinical teams.
- Created data dashboards with Recharts (bar, line, pie charts) to display operational metrics and KPIs for end users.
- Refactored class-based components to functional components with hooks, reducing bundle size and making the codebase easier to maintain.
- Led code reviews and defined component architecture standards across a team of 4 frontend developers.

Stemwizard Academia

Nov 2023 – Sep 2024

Abbottabad, Pakistan — Part-time

Senior Frontend Developer

Airacademic web app platform with data-heavy dashboards and admin tools built on React.js, Next.js, and a Python FastAPI backend.

- Cut page load time by up to 45% through bundle optimization, image compression, and applying SSR/ISR strategies in Next.js.
- Built high-volume data tables with server-side and client-side pagination, sorting, and filtering for large-scale datasets.
- Developed SPAs using React-Redux architecture connected to a Python FastAPI backend, handling large data sets efficiently on the frontend.
- Implemented role-based authentication and protected route architecture using React and Redux.

Additional Expertise & Side Projects

Beyond web development, I build mobile apps and AI-powered tools on the side. This shows I can work across platforms and integrate modern AI APIs — useful for teams that value versatility.

Quizly — AI-Powered Voice English Practice App (React Native)

- Built a voice-based English practice app from scratch using React Native (Expo) and OpenAI's speech + chat APIs.
- Users speak out loud and get real-time AI feedback on grammar, vocabulary, and fluency — no typing needed.
- Stack: React Native, Expo, TypeScript, OpenAI API (Whisper + GPT), Expo Audio, React Navigation.

DocQuiz AI — Document-to-Quiz Generator (Next.js + AI)

- Built a web app that lets users upload any document (PDF, DOCX) and auto-generates a multiple-choice quiz using an AI language model.
- Great for students, trainers, or anyone who needs to quickly turn content into a test.
- Stack: Next.js 14, TypeScript, OpenAI API, React Hook Form, Tailwind CSS, Vercel.

AI-Assisted Development Workflows

- Set up and actively use Claude Code CLI with a custom .claude/ architecture for context management, Figma-to-code via MCP, and automated slash commands.
- Comfortable integrating OpenAI, Claude, and other LLM APIs into both web and mobile products.
- Experience with prompt engineering, multi-turn conversation design, and building real AI-powered features in production apps.

Education

Bachelor of Science in Software Engineering

Islamia University of Peshawar

2021
